Good habits

If something looks wrong

Before you start

Everything on your website that changes often, like menus, prices, and announcements, is yours to edit. You do not need any technical skills. This guide walks you through every screen.

Where to go

Your admin area lives at this address once your domain is live:

```
https://meltingmoments.ca/admin
```

Until the domain switch is complete, use this address instead:

```
https://melting-moments-seven.vercel.app/admin
```

Bookmark it in your browser so it is always one click away.

What you need

Just your admin password. Keep it somewhere safe and do not share it. Anyone with the password can change the website.

Four things worth knowing

- **You stay signed in for about a week.** After that, the site asks for your password again. This is normal.
- **Changes go live within moments.** When you save, the public website updates right away. There is no separate publish step for most screens.
- **The site keeps working while you edit.** Visitors never see a half-finished page. They see the last saved version until your new save lands.
- **Hiding is not deleting.** Most screens have a visibility switch. Switching something off hides it from visitors but keeps it safe in the admin, so you can bring it back any time.

Tip: The admin works best on a computer or tablet. It works on a phone too, but the menu editor is easier with a bigger screen and a mouse.

Signing in

The admin area is locked behind your password. Here is how to get in.

1. Open your browser and go to the admin address from the previous page.
2. You will see a dark screen titled **Admin Console**.
3. Type your password into the **Master Password** field.
4. Click **Enter Console**. You land on your dashboard.

The sign-in screen. Enter your password and click Enter Console.

If you mistype the password, the screen says **Invalid password**. Just try again. If you get it wrong many times in a row, the site makes you wait a short while before the next attempt. This protects you from strangers guessing the password.

You stay signed in for about 7 days on that browser. When the week is up, the admin sends you back to the sign-in screen. Type your password and carry on where you left off.

Careful: Only sign in on devices you trust. On a shared or public computer, use a private browsing window and close it when you are done.

Your dashboard

The dashboard is your home base. It shows what needs attention and links to every editing screen.

The dashboard: number cards on top, quick actions, recent inquiries, and the activity log.

What you see

- **Number cards:** inquiries, booked events, menu items, and a second row for Guido's orders and products.
- **Quick actions:** one-click shortcuts to every editing screen.
- **Recent Inquiries** and the **Activity Log:** the latest contact form submissions, and a running list of recent changes made in the admin.

When your announcement banner is switched on, a yellow strip at the top reminds you that it is live and shows a **Manage** button.

Finding your way around

The left sidebar is the same on every screen: **Dashboard** and **Inquiries** at the top, then **Content** (Banner, Site Content, Menu Editor, FAQ, Testimonials), then **Guido's Gourmet** (Products, Orders), then **System** (Settings).

Tip: If you try to leave a screen with unsaved changes, the admin stops and asks first. That is your cue to save before moving on.

Catering menus

This is the screen you will use most. Everything here feeds the public Menus page: the dishes, their descriptions, their prices, and the order they appear in.

The menu editor. Category tabs on top, one row per dish below.

Your menu is organized into categories, shown as tabs along the top with an item count on each. Click a tab to see that section. Each dish is one row with, from left to right: a drag handle, a checkbox, the name and description, the price label, a star button, a visibility switch, and Edit and Delete buttons.

Add a dish

1. Click **+ Add item** at the top right. A panel slides in from the side.
2. Type the **Name** of the dish.
3. Pick a **Category**. To start a brand new section, choose **New category** at the bottom of the list and type its name. New sections are saved in ALL CAPS to match the existing ones.
4. Add a short **Description**. It appears under the dish name on the public menu.
5. Enter a **Price** per person, or leave it blank when the dish is included in package pricing.
6. Check the **Price label**. It writes itself from the price, for example a price of 9.95 becomes \$9.95/pp, and a blank price shows as Included. You can overwrite it with your own wording, and once you do, it stays hands off.
7. Switch on **Chef's Pick** if you want the badge next to this dish.
8. Leave **Active** on so the dish shows on the public site.
9. Click **Add item**. A green message confirms it saved.

The add item panel. Name and category are required, everything else is optional.

Edit a dish

1. Find the dish and click **Edit** on its row.
2. Change what you need. Picking a different category moves the dish there.
3. Click **Save changes**.

Hide a dish without deleting it

Every row has a small switch. Flip it off and the dish disappears from the public menu but stays right here, greyed out with a **Hidden** tag. Flip it back on whenever the dish returns. This is perfect for seasonal items.

Delete a dish

1. Click **Delete** on the row.
2. A confirmation box appears. Read it, then click **Delete** to confirm.

Careful: Deleting is permanent and cannot be undone. If there is any chance the dish comes back, hide it with the switch instead.

To remove several dishes at once, tick the checkbox on each row (or use **Select all visible**), then click **Delete selected** and confirm.

Reorder dishes within a section

1. Open the category tab you want to rearrange.
2. Press and hold the dotted **drag handle** at the far left of a row.
3. Drag the row up or down and let go where it belongs.

4. The new order saves by itself. A green **Order saved** message confirms it.

Prefer the keyboard? Press Tab until the drag handle is highlighted, press **Space** to pick the row up, move it with the **arrow keys**, then press **Space** again to drop it. **Esc** cancels the move.

Reorder the sections themselves

1. Click **Order categories** at the top right.
2. In the panel, drag the categories into the order you want them on the public Menu page.
3. Each drop saves immediately. Click **Done** when you are happy.

The order categories panel. Drag a section and it saves on the spot.

Search the whole menu

The search box above the list looks through names and descriptions in every category at once, and groups the results by section. Handy when you cannot remember which section a dish lives in. While a search is active, dragging is paused; click **Clear search to reorder** to get back to drag mode.

Mark a chef's pick

Click the star on any row to give that dish the **Chef's Pick** badge on the public menu. The star turns amber when it is on. Click it again to remove the badge. A couple of picks per section is plenty; if everything is special, nothing is.

Tip: Use the **View live page** link at the top of the list to open the public Menu page in a new tab and see exactly what your visitors see.

FAQs

These are the questions and answers on your public FAQ page. The page has two sections, Catering and Guido's Gourmet, and each question belongs to one of them.

The FAQ manager. Each question shows its section badge, visibility, and actions.

Add a question

1. Click **+ Add FAQ**.
2. Type the **Question** the way a customer would ask it.
3. Write a clear **Answer**.
4. Pick a **Category**: Catering, Guido's Gourmet, or General. General questions appear under the Catering section.
5. Click **Save**.

Everyday changes

- **Edit** opens the same panel with the text filled in.
- The **Visible / Hidden** button hides a question without deleting it.
- Drag the handle on the left to reorder. Put the most asked questions first.
- **Delete** removes a question permanently, after a confirmation.

The starter questions

Your site shipped with a built-in set of questions. If this list is ever empty, the public page falls back to that set and this screen offers an **Import starter FAQs** button. Import them once and they become yours to edit.

Testimonials

Kind words from clients, shown on your public Testimonials page. Add the good ones as they come in.

Add a testimonial

1. Click **+ Add Testimonial**.
2. Type the **Author**, for example Sarah & James.
3. Add a **Role / Context** if you like, for example Wedding Clients, 2026.
4. Paste or type the quote into **Testimonial**.
5. Pick a **Brand**: Catering, Guido's Gourmet, or Both. Both means the quote can appear anywhere on the site.
6. Pick a **Rating** from 1 to 5 stars, or choose No rating to show the quote without stars.
7. Click **Save**.

The screenshot shows the Melting Moments admin console. On the left is a dark sidebar with the 'Testimonials' menu item highlighted. The main content area is titled 'Testimonials' and shows a message: 'No testimonials yet. Testimonials appear on the public site once you have. Until then, the public /testimonials page short invitation to get in touch; there are no pig reviews.' Below this message is a '+ Add Testimonial' button. On the right, the 'New Testimonial' form is open. It contains the following fields and options:

- AUTHOR**: A text input field with the placeholder 'e.g. Sarah & James'.
- ROLE / CONTEXT**: A text input field with the placeholder 'e.g. Wedding Clients, 2026'.
- TESTIMONIAL**: A large text area with the placeholder 'What did they say?' and a character count '0/2000'.
- BRAND**: Three chip buttons labeled 'Both', 'Catering', and 'Guido's Gourmet'. Below them is a note: 'Which brand this quote is about. "Both" shows it everywhere.'
- RATING**: A row of six buttons: 'No rating', one star, two stars, three stars, four stars, and five stars. Below them is a note: 'Optional. Pick "No rating" to show the quote without stars.'

At the bottom right of the form are 'Cancel' and 'Save' buttons.

The testimonial panel. Brand and rating are chosen with the chip buttons.

The list works like the other screens: drag to reorder, use **Visible / Hidden** to take a quote off the site without losing it, **Edit** to change the text, and **Delete** to remove it for good.

Announcement banner

A slim strip pinned above the navigation on the public site. Use it for time-sensitive news: holiday hours, booking season, a new product line.

The banner editor. The preview at the top shows exactly how the strip will look.

Turn the banner on

1. Switch on **Enable Banner**.
2. Type the **Banner Text**. You have 120 characters, but under 80 reads best.
3. Optionally add a **Link** so clicking the banner takes visitors somewhere. Use a page on your own site like `/contact` , or a full address starting with `https://` . Leave it blank for no link.
4. Choose where it shows under **Show On**: All Pages, Catering Only, Guido's Only, or Homepage Only.
5. Pick a **Banner Style**: Dark, Midnight Gold, or Light / Bone.
6. Check the live preview at the top, then click **Save Changes**.

To take it down later, switch **Enable Banner** off and save. Your text and settings are kept for next time, and while the banner is live your dashboard shows a reminder so it never lingers by accident.

Careful: Nothing here goes live until you click Save Changes. An amber Unsaved changes note tells you something is waiting to be saved.

Site content

The headings and paragraphs on your main pages: Homepage, About, Menus, Weddings, Private Events, and Corporate. Each field tells you exactly where its text appears.

The site content editor. Pick a page tab, edit the text, then publish.

Change some wording

1. Click the tab for the page you want, for example **Weddings**.
2. Find the field. The grey hint under each one describes where that text sits on the live page.
3. Type your new wording. An amber **Edited** dot appears next to any field you change, and on its page tab, so you can always see what is pending.
4. Click **Publish Changes** in the bar at the bottom of the screen. Only the fields you touched are published. The same bar offers **Discard**, which returns everything to the last saved version.

Changed your mind about an old rewrite? Every customized field has a **Reset to default** link that restores the original site copy. It still needs a publish to go live.

Tip: Some titles stack across two lines on the page, like CATERING MENUS. In those fields each line of text becomes one line on the page, so keep the line breaks as they are.

Business settings

Your business details in one place. What you save here updates the public Contact page and the business information search engines read from your site.

Business settings. These details feed the Contact page and search engines.

The fields

- **Business Name, Owner / Chef, Address, Phone, Email, Website:** shown on the Contact page.
- **Instagram URL, Facebook URL, Google Business Profile URL:** these feed the structured business data that search engines like Google read, which helps your listings stay accurate.
- **Hours note:** a short line like Consultations & tastings by appointment.
- **Email on new inquiry:** when on, you get an email every time someone submits the contact form. Customers always receive their own confirmation either way.

Saving

Click **Save Changes**. If something is not quite right, for example a web address with a typo, the screen highlights that field in red and does not save until it is fixed.

Tip: After changing your phone number or email, open the live Contact page and click it once yourself. Thirty seconds of checking beats a week of missed calls.

Guido's products

The take-home range: lasagnes, pot pies, soups, pasta, desserts, and holiday items. This screen controls what appears on the public Guido's menu.

Guido's products, grouped by category tabs. Drag rows to set the public order.

Add a product

1. Open the category tab it belongs in and click **+ Add Product**.
2. Type the **Name** and confirm the **Category**.
3. Set the price. If the product comes in one size, just enter the **From price**. If it comes in sizes, click **+ Add size** and enter a label and price for each, for example Family (4-6). The From price on the public menu is then worked out for you from the cheapest size.
4. Pick an **Image** from the picture grid, or leave it blank to show a neutral placeholder.
5. Leave **Available** on. Switch on **Limited edition** only for short-run items; it adds a LIMITED badge on the menu.
6. Click **Add product**.

The product panel with size variants. The from price follows the cheapest size.

Sold out and back in stock

Flip the **Available** switch on a row and the product shows as sold out on the public menu. It stays visible so customers know it exists; they just cannot order it. Flip it back when you restock. No deleting, no retyping.

Rows drag to reorder just like the catering menu, and **Edit** and **Delete** work the same way too. Deleting is permanent, so for anything seasonal, use the Available switch instead.

Guido's orders

Every order placed through the Guido's page lands here, newest first. The list checks for new orders every minute on its own.

The orders list. Filter by status, search by name or email, click a row for details.

An order's journey

Update the stage from the dropdown on each row.

STATUS	WHAT IT MEANS
Received	Just arrived, not started yet.
Preparing	The kitchen is on it.
Ready	Packed and waiting for pickup or delivery.
Delivered	Done. Went out for delivery and arrived.
Picked up	Done. The customer collected it.

Moving an order backwards, say from Ready back to Received, asks you to confirm first.

Working an order

1. Click the row to expand it: items, phone, email, address, and any customer notes. The email and phone are clickable.
2. Use **Copy order summary** to copy the whole order as text for a message or a kitchen printout.
3. Update the status as the order progresses.

Careful: Deleting an order is permanent. Orders still in progress get an extra warning first.

Customer inquiries

When someone fills in your contact form, it arrives here with their event details. This is your lead list, so check it daily.

The inquiries list. Tabs filter by status; clicking a row opens the full detail.

Statuses

Every inquiry is **New**, **Contacted**, **Booked**, **Declined**, or **Archived**. Change it from the dropdown on the row or in the detail panel. The tabs filter the list; All shows everything except archived.

Handling an inquiry

1. Click the row to open the detail panel. The customer's submission is read-only, so nothing changes by accident.
2. Click **Reply via Email** to open a pre-addressed email, then set the status to **Contacted**.
3. Use **Admin Notes** for your own record: quotes, tasting dates, dietary details. Notes save on their own when you click away, and customers never see them.
4. When the event is confirmed, set the status to **Booked**.

Tidying up

Set old inquiries to **Archived** to move them out of the everyday view without losing them; **Restore** brings one back to the status it had before. Deleting an inquiry is permanent and removes your admin notes with it.

Export CSV downloads the whole list, admin notes included, as a spreadsheet that opens in Excel, Numbers, or Google Sheets. Good for a year-end review or a backup.

Good habits

A few small routines that keep editing painless.

Check the live page after you save

Every editing screen has a **View live** link that opens the matching public page in a new tab. After a save, click it and glance over the result. It takes ten seconds and catches typos while they are fresh.

Edit in one browser tab at a time

Keep just one admin tab open while you work. Two tabs editing the same screen can quietly overwrite each other, and the last save wins.

Read the toasts

After every action, a small message slides in at the corner of the screen. The colored edge tells you what happened.

COLOR	MEANING	WHAT TO DO
Green	Saved. The live site is updated.	Nothing. Carry on.
Red	The save failed. Your change was put back the way it was.	Read the message, then try again.
Blue	Information, nothing saved or lost.	Just read it.

Let the safety nets work

The admin asks before anything destructive: deletions always confirm first, and leaving a screen with unsaved changes triggers a warning. When one of those boxes pops up, slow down and read it. They only appear when it matters.

Tip: Big menu rewrite coming? Do it in a quiet hour, section by section, checking the live page as you go. Small saves are easier to check and easier to fix.

If something looks wrong

Almost everything you will ever run into is one of these four situations.

It says my session expired

You have been signed in for more than a week, so the admin locked itself again. Click **Log in again**, enter your password, and you are back. One thing to know: anything you changed after the session expired was not saved, so redo those last edits once you are signed in.

I got a red error message

The save did not go through, and the screen has already put things back the way they were, so nothing is half-saved. Usually it is a brief internet hiccup. Try the same change again. If it keeps failing, check your connection, and if it still fails, get in touch with us.

I deleted something and want it back

There is no undo button for deletions, which is exactly why the admin asks you to confirm each one. If something important was deleted, contact us as soon as you can, and note down roughly when it happened and what it was called. The sooner we hear, the better the chances.

The live site does not show my change

First, make sure you actually saved: look for the green message, and on Site Content and Banner remember there is a Save or Publish button to click. Then refresh the public page in your browser. If it is still stale after a minute, contact us.

Need a hand? Contact your web team. Include what you were doing, what you expected, and what you saw instead. A screenshot helps enormously.
